

LAB 8 : Database Handling in Flutter

Name : Bhalodiya Khush Narendrabhai.

Roll No. : CE066

Batch : A4

PROGRAM 1 — Open/Create Database

Program 2 :

insert_query

Aim:

To perform INSERT and SELECT operations using SQLite in Flutter.

Brief Explanation:

The program inserts student records into the SQLite database using the insert() method. The query() method is then used to retrieve the stored records from the database.

Result:

Student data was successfully inserted into the SQLite database and retrieved using a SELECT/query operation.

Program 3 :

Update_Delete

Aim:

To perform UPDATE and DELETE operations on SQLite data.

Brief Explanation:

The update() method modifies an existing database record, while the delete() method removes a record from the SQLite table.

Result:

Database records were successfully updated and deleted.

Program 4 :

model_mapping

student_crud_app

Program 5 :

Program 6 : Transaction_batch

6:11

UPDATE and DELETE

Rows after UPDATE:

```
[[{"id": 1, "name": "Aarav", "branch": "CSE"}]]
```

Rows after DELETE:

```
[]
```
